

Tables and side tables with fixed or adjustable top.

The aluminum **base** is matt varnished in avorio or grafite colour and is provided with plastic spacers. A stainless steel **worm gear** allows the height adjustment of the versions where this is foreseen.

The Giro **tabletop** is available in lightened concrete, Venice, Luce, Glaze and stoneware hand-painted with oxidized colours.

New options are now introduced:

- thermo-treated ash heartwood, that is, subjected to a completely ecological manufacturing process that increases its dimensional stability, makes it suitable for outdoor use and gives it particular shades of colour
- Graniglia or Lias, a mix of limestone and clay respectively without or with a modern mosaic decoration composed with ceramic fragments in pre-established colour combinations
- stoneware decorated with glass
- Cristal, a laminated glass, made by inserting a layer of Brio fabric between two sheets of transparent extralight glass. With this last kind of top, the aluminum structure is gloss-varnished in all of the colours in the collection.
