

Seating platform with backrest composed of a single, large and independent cylindrical element.

The **platform is padded** with recyclable expanded polyethylene mixed with Aerelle® blue polyester fiber and a layer of recyclable polyester, encased in a fixed cotton covering.

The **upholstery of the platform** is removable and composed of a layer of synthetic felt - made from polyester fibers derived from the recycling of PET bottles from waste sorting, that will be 100% recyclable again - to which a décor is applied, each time different, made by using production cuttings of the different fabrics and materials in the collection that would otherwise remain unused.

The backrest is simply laid on the platform and can freely move to be placed in the desired position.

The **backrest is padded** with recyclable expanded polyethylene mixed with Aerelle® blue polyester fiber encased in a fixed covering in three-dimensional black polyester fabric.

The **upholstery of backrest** is fixed and made of Maglia Rasata, an elastic tubular knit produced with polyester yarns remained from the weaving of the indoor fabrics in the collection.
